**Subject:** RE: 112312- Preliminary Cumulative Water Sampling Data Summary 2020-01-03

All,

My apologies. Please disregard the previous preliminary cumulative water sampling data summary sent out earlier today. Attached is the full cumulative water sampling data summary for CTEH water sampling activities since November 27, 2019 and surface water/drinking water sample results received as of January 2, 2020. Please note that at the time of this report, we have not collected any new samples or received new results after the report produced on Monday.

- As of January 2, 2020, a total of 231 surface water samples have been collected at 21 different locations for VOCs, SVOCs, PAH, PFAS, TPH, TOC, oil and grease, ethylene glycol, and asbestos analysis. Results of these analyses are not representative of drinking water sources.
- As of January 2, 2020, 215 surface water sample results have been received for VOC analysis and 131 results received for asbestos analysis.
- There have been no exceedances of TCEQ Contact Recreation Water Protective Concentration Limit (PCL) screening levels for the surface water samples with available PCLs. Where no PCLs are available, results are being compared to background surface water samples.
- There have been no exceedances of TCEQ Drinking Water Maximum Contaminant Level (MCL) screening values for the drinking water sample analyzed.

Thanks,

**Dana Szymkowicz, Ph.D.**
